

Investec UK Special Situations Fund

As at end December 2009

Summary of investment objective

The Fund aims to provide a combination of income and long term capital growth, primarily through the application of a contrarian approach to investment in UK equities and in derivatives, the underlying assets of which are UK equities.

Fund overview

The UK Special Situations Fund is run on an investment approach based on a contrarian view on the timing of buy and sell decisions. We assess whether or not the company and its stock appears to be out of favour with the market and therefore appears to be undervalued.

The range of securities available is reduced on a preliminary basis by passing those companies with a market capitalisation above £100 million through a screening process which highlights the poorest performing stocks. This isolates opportunities with attractive characteristics which are then, in turn, scrutinised in greater detail to identify investment opportunities. We aim to disprove the conventional wisdom surrounding an out of favour stock and look for good underlying fundamental values such as the company's assets, current cashflows or profits.

We avoid the most popular market sectors, believing that these stocks could be overvalued. We believe that this strategy focuses on lower risk shares, as each new holding will typically have fallen significantly in price, yet have a combination of valuation factors which suggests that the shares are trading at a discount. As each share is generally out of favour for a unique reason and is expected to come back into favour in its own cycle, there is potential for smoother returns over a longer-term horizon.
